KU KDM'14, Zakopane
March 12-14, 2014

- Design data access in distributed environment
- Full distribution – lack of central point
- Efficient inter-storage communication
- Fast file lookup by request broadcasting
- Automatic reconfiguration and ease of adding the new nodes
- Build a prototype system for evaluating the data access algorithms

Architecture overview

We invite you to see our poster no. 14 with more detailed architecture description.
